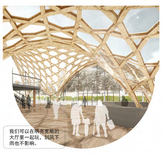
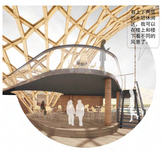
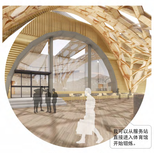
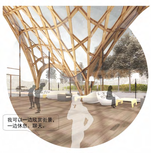
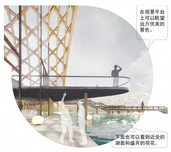
方案与结构布置

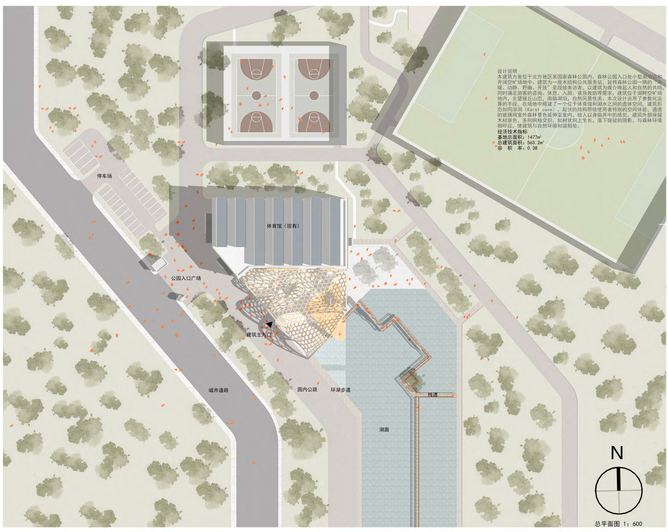


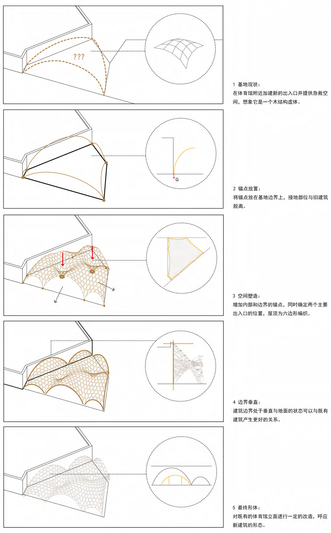










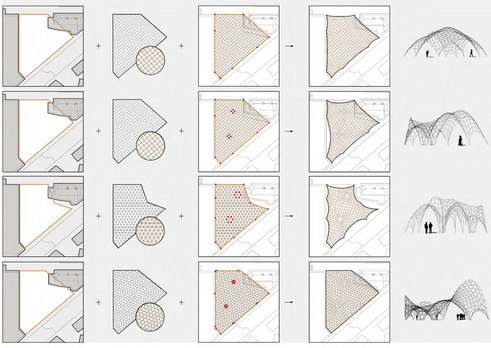


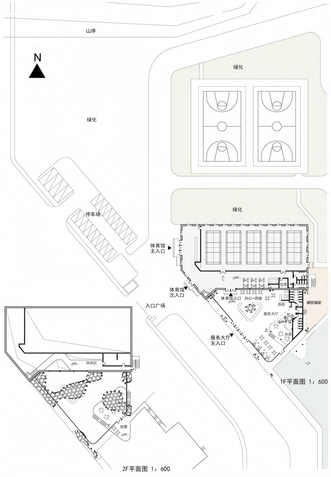
控制曲面形态的五大因素 Five factors

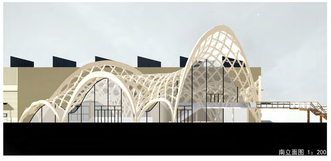
将建筑条件转化为控制模型输出的参变量，即可直观地控制最终生成的曲面形态，也可通过调取参变量的属性进行多方案比较。

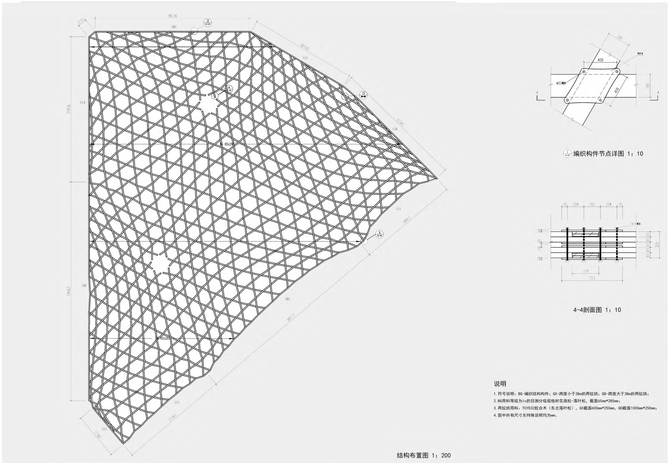
By converting the building conditions into the parameters that control the output of the model, you can intuitively control the shape of the resulting surface, and you can also perform multi-scheme comparisons by adjusting the attributes of the parameters.

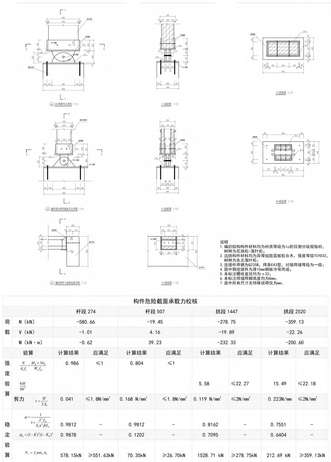
Form finding 结构与找形











构件危险截面承载力校核
		杆段 274		杆段 007		拱段 1447		拱段 2930	
荷载	N (kN)	-580.66		-19.45		-278.75		-309.13
